

Data governance

Is data a commodity?

Yes. But not a commodity like potato.

Reversible; Excludable.

But data is not regulated

Localization: Store data in a server which is in local.

Rights, individual, community, social

Regulations? What about innovation and freedom?

In India, IT companies are 'shops'. They don't come under ITSMF.

Ethics washing - like green washing, is a practice of making a company seem more ethical than it is.

Techno solutionism and reification

Techno solutionism - mindset every problem can and should be solved

with technology

Reification is when you think or treat something abstract as a physical thing. Use of technology over materially solving the problem.

AI as the scapegoat, or the machine never "understands" or "does" policy

Curse of Dimensionality:

More dim., more order in mathematics.

PCA, SVD

Oracle: alg. which create synthetic test data for algorithm.
