PS.643

→ **Metaethics**

Earth is fat

Murder is awesome

Doing drugs is cool

Moral statements ⟶ have ⟶ answer → True ⟶ people believing this
└ False } Cognitivists
└→ No answer   } Non Cognitive

Stealing is bad   Similar
                        → Cognitivists
Earth is triaingle
                        Not Similar
                        → Non-Cognitivists

No Moral statement is true → people who believe
this → Error Theorists

Some Moral stat. can be true → Moral Realist
Objectively.

→ Moral Cognitivists ⟶ error theorist
                     ⟶ Moral Objectivist
                     ⟶ Moral Subjectivists

                        → emotivists (emotion/Sentiment)
→ Moral Non Cognitivist ⟶ Not description → a prescription → Prescriptive
                        → Quasi-realism

Moral statement is true → only in social
context → Moral Subjectivists

→ Is aught gap : Most moral arguement start with
                 most logical statement, logic, logic logic
                 then 'ought'.

                                            ought
                                    "but
AI has → this accuracy → This model → "Should not be bias"
from 'descriptive' it turns to 'prescriptive'.

→ Companies want to future proof themself from the
  incoming laws so they do not face problem in future.

Project Moven : Satelite can find every detail of any person
Employee vs Boss
(wants as)   (Gives least
much money)   (money as much
as possible) possible)

Google has been allotted this project → The engineers
realised the scope so they refused to work → strike
→ Moral of the story : AI system are humans made,
                       humans can refuse to make them
                       Regulation comes from above but
                       work is done by employees.

→ Issues with tech ethics
→ Google → employee denied → but the pentagon will go to
  another company → they will agree.
→ Problem is how can a gov't can ask for such project in
  that way.
→ Determinism : belief that history is determined by technology
→ · ∀   is wrong

→ Ethiscwashing : divert the discussion inorder to not do anything real.

What is a Mind?

→ Conscioussness : A sleeky person is unconcious

Chinise Room → closed → small window → person sitting → don't know chinise → An infinite magic dictonary → playing with symboles → endranging → the english to chiness → Technically its language translation

AI do the some it doesn't know the meaning → it just flips the symbols.

Computer → is not a mind → mind is not computer.

Dualism → Body → Hardware
          Soul → Mind

Idealist → Mat
Materialist →

Mind & Brain are not seperate

Matter → $\overset{\text{controlled by}}{\longrightarrow}$ laws of Physics → Matter made, $\overset{\text{Brain}}{\underset{\wedge}{\text{Brain}}}$ → Law of Physics

→ Materialism : In general & for the mind.

→ Queivia : Two different brains think about the same
                apple color differently ?

→ What is farness , Accountoblity and Trousparancy
  → Dataset should not be biased
  → Religion, cast race biased reelult   policy level
  → Feature explainoblity → us useless to a end user → it's only
  useful to an enginear .

→ Issues with F A T.
  → Building cement example
  → Vietnam war example
  →
